Projects

GEAR DOCTOR Gear Doctor is a web application for booking a mechanic service at the customer's place of need. In this application, a customer can book for a service from his current location and the nearby mechanic will be made available to provide service to that customer. This saves a lot of time for the customer and also facilitates quick service.

Technology Used: HTML, CSS, PHP, JAVASCRIPT MYSQL

ONLINE HOSPITAL MANAGEMENT Have developed a web application titled "Online Hospital Management System" for Jayashree Hospital, Mangalore. The main objective of the Hospital Management System is to manage the details of the Hospital and its stakeholders. The aim is to automate existing manual systems into full-fledged computer software, fulfilling their requirements, so that their valuable report can be stored for future references with easy access.

Technology Used: HTML, CSS, PHP, JAVASCRIPT MYSQL
